***A Practical Guide to
Coping With, Managing and Leading Difficult
People ... Including Yourself***

Over the past several years many individuals have attended my workshop entitled *Coping With, Managing and Leading Difficult People, Including Yourself*. These individuals have conveyed that the information we share with each other is helpful, relevant, timely and useful, and that in many cases discussing our communal growing pains have helped to make it through a day, a week, a month, and sometimes, a career.

The contents of this book are based on practice, not theory. The stories and strategies are familiar and are reminders of the daily occurrences we have in our schools and offices. It is about people we see everyday, how to work well and effectively with them, and while doing so, still maintain your sanity. If nothing else, it affirms that no matter in what educational setting you find yourself, be it a school, or an office, people and situations remain the same.
